

## Qu-7 / Qu-7D

### Technical Datasheet

(Qu-7D Top Panel)

(Qu-7D Rear Panel)

## Features

---

- 96kHz XCVI Core  
variable bit-depth up to 96bit, <0.7ms latency
- 38x Inputs to Mix (32x Mono/Linkable, 3x Stereo)
- Stereo Main LR Output
- 12x Mixes (6x Mono/Linkable Aux/Group, 6x Stereo  
Aux/Group)
- 4x FX Sends
- 4x Mono/Linkable Matrix Mixes
- 32x XLR/Jack 'Combi' Mic/Line Input Sockets
- 2x Stereo Line Input Sockets (each 2x TRS)
- 1x XLR Talkback Socket
- 12x XLR Output Sockets
- 2x TRS Output Sockets
- 1x AES3 Stereo Digital Output Socket
- 128x128 SLink Port for Everything I/O expansion and  
system connections
- 16x16 48/96 kHz Dante interface (Qu-7D only)
- Stereo Headphone Output
- 7" Capacitive Touchscreen
- 33x 100mm Motorised Faders
- 4x Customisable Channel Strip Layers
- 8x SoftKeys
- 12V Lamp Socket
- Configurable single/dual Footswitch Connection
- Configurable Chromatic Channel Meter LED's
- IEC Mains Connection with Worldwide PSU
- RJ45 Network Socket
- USB-A For stereo audio record/playback and data  
(2 Channels @48/96kHz, 24bit)
- USB-C Audio interface for multichannel record/playback  
(32x32 @48/96kHz, 16/24bit)
- SD Card Slot for multichannel audio record/playback  
(16 Channels @96kHz, 32 Channels @48kHz, 24bit)
- Input processing – Trim, HPF, Gate, Parametric EQ,  
Compressor, Channel Delay
- Mix processing – Graphic EQ, Feedback Assistant, PEQ,  
Compressor, Channel Delay
- Fully patchable Insert points
- 6x Multi-FX Engines with dedicated Stereo Return  
Channels and PEQ
- 32 Channel, zero latency, DEEP Automatic Mic Mixer
- 31/61 Band Real Time Analyser
- Feedback Assistant with 8 simultaneous detectors
- Gain Assistant
- 300 Scene memories per Show
- Channel Safes, Global/Per-Scene Recall Filters
- FX, Processing and Channel Libraries
- User Permissions to restrict operator access
- DAW Control emulation via USB or TCP/IP
- Compatible with ME personal monitoring range
- Remote control via free apps –  
Windows/MacOS/iOS/Android

## Architectural & Engineering Specification

---

The mixer shall be a standalone digital mixer built around a 96kHz XCVI FPGA core with 38 input sources mixing to 28 busses, with a system latency of <0.7ms.

All input and output processing, routing options and system configuration shall be accessed and adjusted via a 7-inch capacitive touchscreen and associated dedicated rotary control.

The surface shall include moving faders with 4 layers, each having dedicated keys, giving easy access to input channels, mixes, FX sends, FX returns, DCA masters and MIDI control.

Each fader strip shall have dedicated Select, Mute and PAFL buttons with indicators, a variable LED meter, a peak indicator LED and a backlit LCD display.

There shall be dedicated physical controls which allow for adjustment of key processing parameters, and which follow the select button for the input and output channels.

Send levels to mixes shall be displayed and adjusted using the faders in conjunction with dedicated Mix keys.

A 'CH to All Mix' key will be provided to allow viewing and adjustment of all send levels from the selected channel.

Quick access to assignment and switching of Pre/Post send points will be provided using dedicated keys.

The fader and rotary controls shall include a white skirt in contrast to the colour of the surface for visibility during operation in low light conditions.

8 user-assignable SoftKeys with multi-colour LED illumination shall be provided for quick access to Input/Mix/DCA/Group Mutes, Tap Tempo, Scene Controls, MMC and SQ-Drive Controls.

There shall be dedicated Copy/Paste/Reset keys for parameter data.

A footswitch connection shall be provided to allow assignable control from an optional single or dual footswitch.

A view key shall allow the temporary display of channel number and patching on the channel strip LCD displays, as well as current SoftKey assignments on the touchscreen.

Local analogue inputs shall use balanced XLR/TRS 'combi' sockets and connect to fully recallable, digitally controlled preamplifiers. These shall be able to provide up to +60dB of gain, with a -20dB Pad included on the TRS ¼ inch Jack input for use with line level signals. Industry standard 48V phantom power shall be switchable per socket and apply only to the XLR connection.

The number of local preamps will match the number of faders, to allow a simple, standalone, analogue-like 1-to-1 setup.

An extra, patchable, XLR-only socket with preamp specification matching that of the other XLR inputs shall be provided for Talkback.

Two stereo input connections feeding dedicated channels for playback purposes will each use 2 balanced TRS ¼ inch

Jack sockets, in a half-normalled configuration for use with mono sources.

Local analogue outputs shall be provided on XLR sockets and 2 balanced TRS ¼ inch Jack sockets. These will have a nominal line output of +4dBu.

A stereo digital, professional AES3 output shall be provided via an industry standard 110ohm XLR connection with options for sample rate conversion.

A high-power headphone output shall be provided for monitoring using a TRS ¼ inch Jack socket, with associated level control and dual 12 segment LED meter.

There shall be a USB Type-A connector for stereo recording/playback, data-transfer and firmware updating.

An SDHC slot shall be provided for the recording or playback of multichannel audio, using a standard format to allow files to be imported into any DAW.

There shall be a USB-C connection following the USB 2.0 standard for multi-channel, bi-directional audio streaming and MIDI control between the mixer and a computer.

There shall be an intelligent "SLink" Ethernet audio expansion port with locking EtherCON connector, supporting multiple A&H digital protocols and providing access to 128x128 digital channels, connected over a single cable and allowing remote preamp control of Allen & Heath Everything I/O expanders, connection to Allen & Heath ME Personal Mixing Systems and direct connection to other A&H mixers wherever supported.

A Dante variant will provide up to 16x16 channels of connectivity to a Dante network at 48/96kHz. This model will include a dedicated additional locking EtherCON connection and a bridge to the network port for control messaging.

All Input channels shall contain the following processing: Polarity, Trim, High Pass Filter, Gate, Insert, Parametric EQ, Compressor, Delay, Pan/Balance.

All FX Return channels shall contain the following: Parametric EQ, Pan/Balance.

All Mix channels shall contain the following processing: Insert, Graphic EQ or Feedback Assistant, Parametric EQ, Compressor, Delay, Balance.

6 user-assignable effect racks shall be provided with a library of factory preset FX emulations. The FX racks shall be individually configurable as send/return with a dedicated stereo return channel and sourced from a dedicated FX send bus, a Mix bus or directly from an Input channel, or a unit may be inserted directly into any input or output channel.

A Feedback Assistant will be provided to detect feedback across up to 8 outputs simultaneously and automatically apply up to 16 filters per instance.

The ability to automatically set and monitor preamp gain settings will be provided by a Gain Assistant.

The mixer will allow the insertion of Allen & Heath DEEP processing models to channels, without affecting latency or overall processing abilities.

A 32 channel Automatic Mic Mixer shall be provided for automatic and dynamic assignment of gain in spoken word applications.

There shall be 8 DCA groups and 8 Mute groups.

A Talkback facility shall be provided with the ability to send to any output mix with on screen status indication. An option to enable talkback latching and HPF shall be provided.

A signal generator shall be provided with the ability to send a variable level signal to any output mix with visual assignment status on-screen. The following types of signals shall be available: Sine, White Noise, Pink Noise, and Band-Pass.

Comprehensive input, output, and FX channel and RTA metering shall be provided on-screen.

A PAFL sub-mix shall be provided, for the purposes of monitoring one or more signals and at different points in the signal path.

All signal delays in the system shall be adjustable in Milliseconds, Meters (with metric temperature adjustment) or Feet (with imperial temperature adjustment).

MIDI Transport Control shall be available via the touchscreen and as SoftKey options.

MIDI messaging to and from common core parameters including send levels and muting will use MIDI NRPN messaging. Scene recall will send and respect standard MIDI messages.

The mixer shall provide a Fast Ethernet (100 Mbit/s) port for Cat5 cable connection to a wireless router, access point, existing network or direct connection to a computer for live

mixing control using control apps supported on multiple popular platforms, and for MIDI over TCP/IP messaging.

Input and output channel processing and parameters in the mixer shall be saved on demand as a user library item for recall in other channels. All library items shall be archived with a Show file. Library items shall be transferrable to USB drive as portable data to be used in other systems.

The mixer shall provide the facility to save 300 scenes of the settings of the mixing system and these scenes shall be nameable.

Channel 'safes' shall be provided to prevent selected items from being changed from their state when the safe was enabled. A suitable selection of global and per-scene filters shall be provided to Allow / Block each parameter saved in a scene from being changed as that scene is recalled.

An option shall be provided for password protection for login of several users with different levels of system access and permissions. A particular scene may be chosen to be recalled per change of user-login if desired.

The mixing system shall periodically record all current settings and return the mixer to that state after reboot following a power-cycle.

The mixer shall have a built-in power supply accepting AC mains voltages of 100~240V, 50/60 Hz via an earthed 3-pin IEC male connector mounted on the rear chassis. A Two Pole Push-Button switch shall be provided near the mains input.

Recommended operating temperature for the mixer shall be 5 to 40 degrees Celsius.

The mixer shall be made available in 3 frame sizes, each with a Dante capable variant. These mixers shall be the Allen & Heath Qu-5/Qu-5D, the Allen & Heath Qu-6/Qu-6D and the Allen & Heath Qu-7/Qu-7D.
